Service/repair manuals owners/users manuals schematics - Maglev

(derived from magnetic levitation) is a system of train transportation that uses two sets of magnets, one set to repel and push the train up off the track, then another set to move the 'floating train' ahead at great speed taking advantage of the lack of friction. Along certain "medium range" routes (usually 200-400 miles)

Maglev can compete favorably with high-speed rail and airplanes.
