Conventional Sources of Energy: These sources of energy are also called non renewable sources. These sources of energy are in limited quantity except hydro-electric power. Thu, 17 Jan 2019 11:08:00 GMT Conventional and Non-Conventional Sources of Energy - A non-renewable resource (also called a finite resource) is a resource that does not renew itself at a sufficient rate for sustainable economic extraction in meaningful human time-frames. An example is carbon-based, organically-derived fuel. The original organic material, with the aid of heat and pressure, becomes a fuel such as oil or gas. Fri, 18 Jan 2019 16:15:00 GMT Non-renewable resource - Wikipedia - Energy development is the field of activities focused on obtaining sources of energy from natural resources. These activities include

production of conventional, alternative and renewable sources of energy, and for the recovery and reuse of energy that would otherwise be wasted.
